EDUCATION

B.E. – Information Science And Engineering

Mangalore Institute of Technology and Engineering, Karnataka

Expected Graduation: 2027 | CGPA: 8.2

Class 12 (PUC)

S.V.H PU college, Innanje | Percentage: 87%

Class 10 (SSLC)

Shri Narayana Guru English Medium School, Padubelle | Percentage: 90%

SKILLS

Data Analysis: Data Cleaning, Visualization

Tools: Excel, Jupyter Notebook, MySQL Workbench, Codeblocks, Visual studio, Power BI

Programming: Python, Java, SQL

PROJECTS

Major Project: SHEild: AI-Powered Offline Personal Safety Companion for Women:

Tools/technology: Android Studio (Kotlin), Smartphone Sensors (Accelerometer, Gyroscope, GPS, Microphone), SQLite (Local Storage), Basic Machine Learning / Rule-Based Logic, Speech Recognition (Voice Commands)

Developing an offline-first mobile application for women's safety using smartphone sensors and context-aware detection. The system analyzes motion, rotation, and voice inputs to identify potential danger situations and trigger preventive actions. It includes hands-free interaction through voice prompts and automatic emergency escalation when no user response is detected. The solution ensures real-time safety support without

relying on internet connectivity.

AI-Powered Pre-Send Text Moderation System

Tools & Technologies Used: Python, Flask (Backend API), HTML, CSS, JavaScript (Frontend), Machine Learning (Scikit-learn), Natural Language Processing (NLP)

Developed a real-time text moderation system that analyzes user input before submission to detect abusive language and explicit content. Implemented a machine learning model combined with rule-based filtering to classify messages and assign a toxicity score. Integrated a web-based interface that provides instant feedback, including message status, abuse type, and moderation suggestions. The system also handles simple transliterated text commonly used in regional communication

Ultrasonic glass for the visually impaired | Group of 4

Technologies: Arduino, Ultrasonic Sensor, Buzzer

Developed a wearable obstacle detection device using ultrasonic sensors and Arduino to assist visually impaired users. Integrated vibration and sound alerts for real-time obstacle notification.

Retail Sales Analytics & Demand Prediction Dashboard

Python | SQL | Power BI | Machine Learning | Streamlit

- Built an end-to-end Retail Sales Analytics system for analyzing customer transaction data.
- Performed data cleaning, EDA, feature engineering, and predictive analysis.
- Developed interactive dashboards and generated actionable business insights.

COURSE & WORKSHOPS

- “Introduction to Entrepreneurial thinking “ certified by NEP, IUCEE
- “ Statistics of R programming “ certified by Coursera, Infosys springboard
- “ Front end web developer modern HTML CSS JavaScript “certified by Coursera, Infosys springboard.
- Attended 3 days hands- on session on the topic “innovative embedded system design

And simulation using Arduino and Tinkercad .

- Attended workshop on the topic “ Arduino uno “ by Sreeja rajesh .
- Attended one-day hands-on workshop on: AI Coding with Natural Language (NLD) by experts from oracle in collaboration with Ananya(an initiative empowering young women through digital skills and industry exposure).
- Attended 3 days Power BI Bootcamp by Shaheed Sukhdev College of Business Studies, University of Delhi .

ACHIEVEMENTS & ACTIVITIES

- Participated in Hackathons and Ideathons .
- Actively participated in Unisys competitions.
- Team collaboration experience.
